

Mortality Equations for CONUS: Douglas-fir

Greg Johnson, David Marshall, Aaron Weiskittel

2026-05-01

Data

We took the FIA mortality data subset for Douglas-fir, filtered out stray (likely keypunch errors) states (NY, PA, IL, WI, and MI), and FIA plot locations with missing EPA L3 Codes. This left 186807 observations.

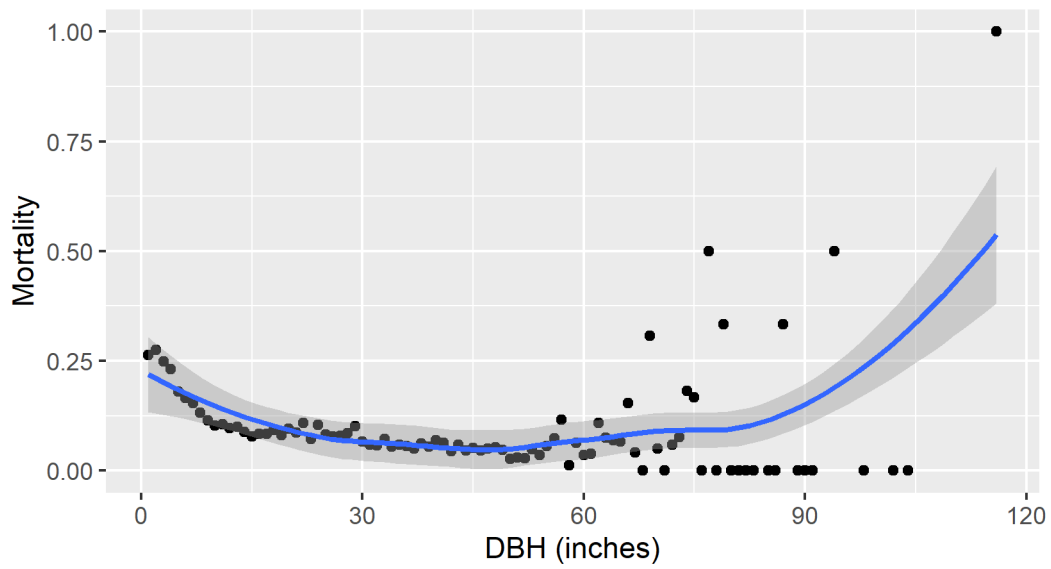

The observations are distributed among states as follows:

State	n
OR	64976
WA	47026
MT	25208
CA	19180
ID	15540
CO	6980
NM	2840
UT	2586
AZ	1545
WY	890
NV	36

We computed the fraction of trees dying over a 10-year period (the interval with the most observations) for classes of explanatory variables. The graphs of mean mortality are below:

Mortality over 10-Year Period

Douglas-fir

Mortality over 5-Year Period

Douglas-fir
